2025 Business Plan, Version 3

This plan describes the coming year for a small software company that sells scheduling tools to clinics. All names and figures are invented for a test document.

Goals

Grow annual recurring revenue from 2.0 million dollars to 2.8 million dollars. Raise customer retention from 88 percent to 92 percent. Reach 600 paying clinics by the end of the year.

Product

Release online booking in the first quarter and automatic reminders in the second quarter. Move the mobile app to a single code base by June. Stop support for the old desktop client in September.

Market

Enter two new regions in the second half of the year, with one sales person in each region. Offer a free trial of 30 days to clinics with fewer than five staff members.

Budget

Total spending for the year is 2.3 million dollars. Engineering takes 45 percent, sales and marketing 35 percent, and support and operations 20 percent. Hiring is limited to six new roles.

Risks

A larger competitor could lower its price, and the mobile move could delay the reminders release. The team will review both risks at the end of each quarter.

Decision Needed

The leadership team must decide by the end of January whether to hire the two regional sales people before online booking ships.
